

Real fieldstone, galvanized and corrugated roofing and large windows are just a few of the common design elements seen throughout Rocking Horse Farm.

Another Successful Project

Rocking Horse Farm Is Expanding

In September 2004, Olaf Anderson & Son and Rocking Horse Farm, a master planned commercial and residential development in southwest Fargo, began construction on a 13,000-square-foot lease building. Concept drawings by T.L. Stroh Architects and Interiors were finalized by Olaf Anderson's in-house architects. Design elements, set by developer Ken Promersberger, give Rocking Horse Farm a unique rural flavor.

Titan Machinery, an agriculture and construction equipment dealer, located its Shared Resource Group to Rocking Horse Farm in March 2005.

For more information on Rocking Horse Farm, call Ken Promersberger at (701) 492-9194.

Left: Classic barn-red siding and track mounted sliding doors mark the entrance to the kitchen.

Olaf Anderson & Son Design Department

Every construction project presents unique and exciting challenges. Digital technology employed by our Design Team has made addressing these design challenges more efficient and accurate. Clients need to know every option is being explored when it comes to the function and aesthetics of their building.

By using AutoCAD and Form Z software, we can quickly develop a preliminary template from which design changes can be made. Moving a wall, adding a door or changing a roof line are no longer time-consuming tasks. The speed and accuracy of three-dimensional software allows us to take a client's vision and digitally model it before it's even built.

The results are immeasurable. Not only does a client have the opportunity to explore multiple options in a timely manner, but a high "comfort level" is established as the project moves towards reality.
